ORCID provides a persistent digital identifier that distinguishes you from every other researcher, and provides linkages between you and your professional activities to ensure your work is recognized.

**1. Register** — it’s free and fast!

Just enter your name and e-mail address, and create a password [here](https://orcid.org/register) or go to https://orcid.org/register

---

**ORCID**

- distinguishes you and your research from other researchers with similar names
- connects your various name formats, eg, Ashley Smith; Ashley H. Smith; Ashley Hudson Smith; A. H. Smith
- connects all previous affiliations or workplaces and your research

The National Institutes of Health and the NHMRC support the use of ORCID iDs by grant applicants. Journals such as *Nature* publish the ORCIDs of their authors, and publishers such as Elsevier, Wiley, PLOS, Taylor and Francis, Springer, and Wolters Kluwer collect ORCIDs for their authors.

For more information, view the video [What is ORCID?](https://orcid.org/register)
2. Add your info
Once you have registered you can easily build your online ORCID profile by adding a brief biography, education details, employment history, links to your personal webpage, Linkedin, Scopus or Researcher ID AND your publications and grants eg …

3. Use and maintain your ORCiD

Remember:

- include your ORCiD when you publish or apply for grants
- regularly update your ORCiD when you have works published or are awarded grants, or change employment etc.

If you have a university affiliation:
Your university librarian can help you create your Scopus Author Identifier and ResearcherID and link them to your ORCID. This will automatically update your ORCiD whenever you publish!

* SA Health librarians will not be able to assist with Scopus or ResearcherIDs: please contact your university librarian if you require help
